

## Application

### Potable Water, Chemical, or Fuel Portable Storage Tank:

Self-supporting and collapsible industrial fabric tanks designed for temporary containment of drinking water, fire fighting water, chemical or fuel containment. The urethane fabric that is used meets all requirements for use in containing products for human consumption if purchased with cover.

The open top design allows for easy filling and to protect water source from outside contamination. Portable and Potable OSPICO Tank comes standard with two 3" input/outlet valves that facilitates filling and removal of water. Our attentive manufacturing capabilities allow us to manufacture a superior product at a competitive price. We have a variety of sizes available of collapsible pillow tanks and onion tanks for potable water, grey water, Spill Response and other liquids with a high standard of features, warranties and workmanship.

### MATERIALS FOR PORTABLE TANK OT-8 STANDARD DATA
